

Security Tool For D365 F&SCM

**Enhancing Security, Compliance, and Access
Control in D365**

DynaTech's Security Tool for **D365 F&SCM**, powered by **Microsoft Dynamics and Azure Directory**, optimizes security operations by automating access control, improving license management, and ensuring compliance.

Key Features

License Allocation & Optimization

Feature: Monitor, track, and optimize user licenses with automated reports, including user license estimator, standard vs. actual usage tracking, and role/duty-wise license breakdown.

Benefit: Reduce unnecessary license costs, ensure proper allocation, and improve overall utilization.

Segregation of Duties (SOD)

Feature: Identify and resolve SoD conflicts at both role and user levels to prevent process conflicts and compliance risks.

Benefit: Minimize security threats and maintain regulatory compliance by ensuring proper duty separation.

Access Control & Role-Based Security

Feature: Detect designation conflicts, assign multiple roles per user across multiple legal entities, and maintain a consolidated view of security assignments.

Benefit: : Strengthen security by aligning access permissions with business policies while improving operational efficiency.

Bulk User & Role Management

Feature: Automate bulk user and role assignments, including role removals and updates, to streamline user provisioning.

Benefit: Save administrative time, minimize errors, and ensure smooth access management across the organization.

Automation & AD Integration

Feature: Automate user deactivation and role modifications based on Azure Directory activity to maintain security hygiene.

Benefit: Improve security by preventing unauthorized access and reducing manual intervention in user lifecycle management.

Delegation & Workflow Management

Feature: Suggest appropriate users for role and workflow delegation, ensuring seamless task reassignment during user absence.

Benefit: Maintain operational continuity and improve workflow efficiency by automating delegation processes.

Audit & Compliance Management

Feature: Maintain detailed audit logs, track user activities, and generate preconfigured compliance reports, including role and duty-wise license usage.

Benefit: Enhance compliance readiness with audit-ready reports, reducing manual effort and ensuring security oversight.
