

D365 CE Admin Tool

Selective Data Migration & Administration for Dynamics 365 CE

DynaTech's D365 CE Admin Tool simplifies data management across environments by enabling selective, secure, and automated data refreshes. Unlike full-environment copies, our tool empowers administrators and business users to refresh only the data they need - ensuring faster, leaner, and more compliant migrations.

With its intuitive interface and intelligent automation, the tool ensures:

Migrate only relevant data with dependent records included.

Protect sensitive data with masking and role-based access.

Automate migrations with scheduling and Microsoft Fabric integration.

Features

Selective Table & Record Migration

Choose specific tables and apply dynamic filters with preview capabilities before execution.

Automation & Scheduling

Run one-time or recurring jobs, save templates for reuse, and ensure up-to-date test/dev environments.

Dependency-Aware Data Traversal

Automatically detect and migrate child records, maintaining full referential integrity across multi-level relationships.

Validation & Logging

Pre-migration checks, post-migration reports, and detailed audit logs for full transparency.

Data Masking & Transformation

Protect sensitive data with field-level masking rules and schema mapping options.

Security & Access Control

Role-based access with optional approval workflows for large or sensitive migrations.

Integration & Extensibility

Leverage Microsoft Fabric pipelines and extend with Dataverse for enterprise-wide interoperability.
